

STADLER®

Engineering at its best

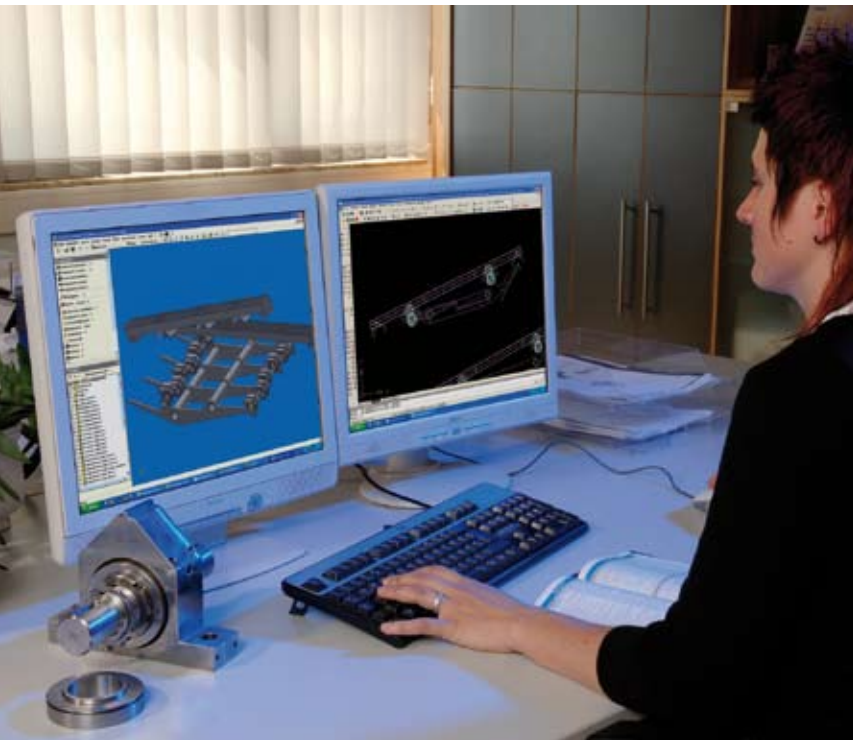

Sorting systems for the waste recycling industry

Technology that gets things moving
Intelligent solutions
Your partner

Our company

At STADLER®, innovation is the driving force for success. We have a tradition of consistently thinking beyond what we have achieved and thus of exceeding the limits set. We are a high-tech special supplier with established structures and more than 100 qualified employees – with sound know-how and an excellent cost-benefit ratio.

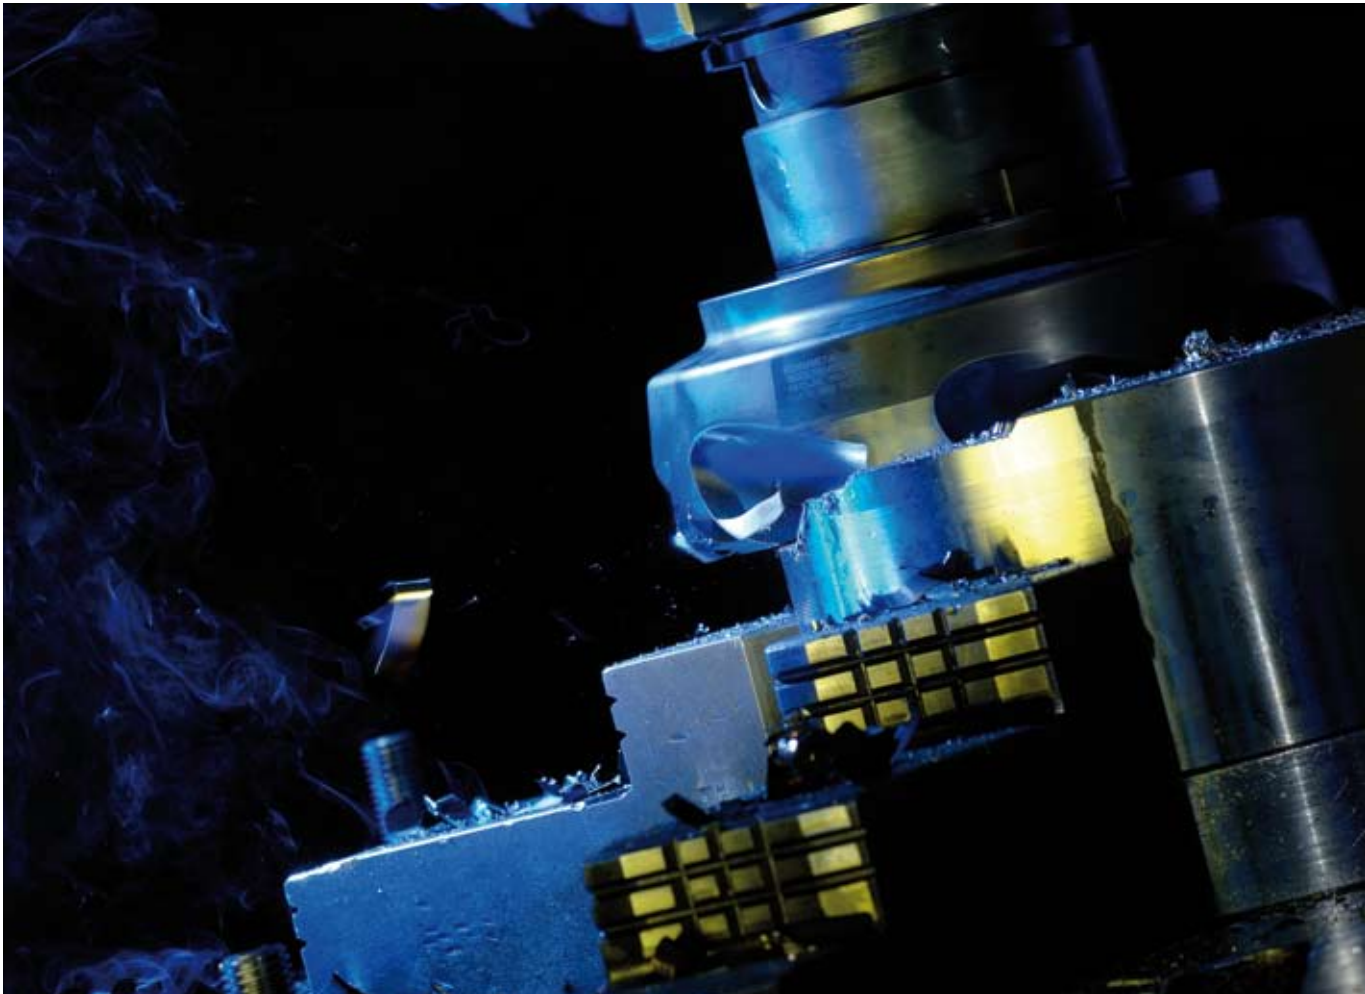

Our services

- Expert on-site support
- Concept and planning in our design departments
- Project management by our own designers and engineers
- Complete production in our factory in Altshausen
- On-schedule assembly at home and abroad
- Maintenance and service by specialist STADLER® fitters

STADLER®

- Technical know-how
- Expertise
- Experience
- Motivation
- High quality
- Responsibility

Any sorting plant can only work as efficiently as its individual components allow.

For this reason, we continually endeavour to develop and produce all components individually in our company with utmost care.

This applies to all production steps – from the selection of high-quality materials and precise machining of metals to the correct assembly of individual functional units.

We plan and produce tailor-made plant concepts for you

- Industrial waste and waste-derived fuel processing
- Sorting of lightweight packaging materials and polymers
- Sorting of household waste
- Sorting of paper and cardboard
- Plastic bottles

STADLER®

Sound conveyor technology with conveyor belts of all types ensures perfect, reliable logistics for the various materials in our sorting plants.

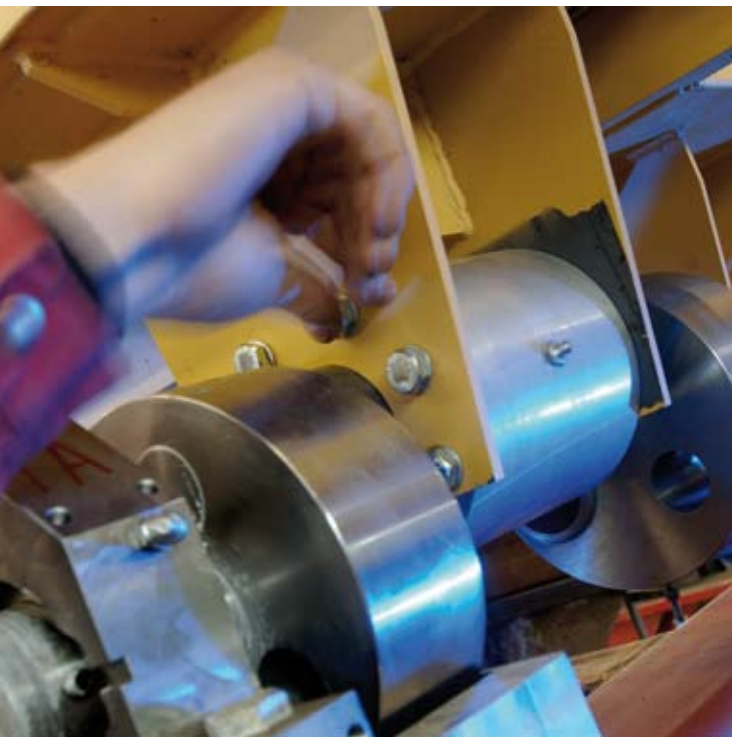

Sorting plants from STADLER® keep things moving!

Don't leave the solution to your planned projects to chance! We offer you technological know-how and maximum quality. Place your trust in our many years of experience and expertise. We support you right up to turn-key delivery and of course beyond.

When it comes to service, you are entitled to expect more than the maximum

In our own STADLER® technology centre in Altshausen we offer our customers the opportunity to test the suitability and sorting result of our sorting technology by running your own material and mixed samples, in our dedicated testing facility.

STADLER®

STADLER® technology centre

Here, all our innovations and standard units are continually checked for function, wear-resistance, flexibility and efficiency.

Innovation

Our product developers have proven their technical expertise and capacity for innovation time and again. STADLER® has received several innovation awards for clever sorting solutions.

STADLER® technology centre

Responsibility beyond the call of duty

True service only begins when the current project has been delivered; with strong support and service back up. We react quickly and reliably and carry out repairs in record time so that your downtimes are kept to a minimum. Service from STADLER® is based on your operational requirements.

For this reason, STADLER® is the right partner for you. Call us – we will provide you with all the information you need for your project.

We offer you engineering at its best.

STADLER®

Product range

Sorting plants for:

- household waste
- co-mingled
- commercial industrial waste
- refuse derived fuel production and specialized waste streams

STADLER®

Components:

Ballistic separators | Screening drums | Conveyor technology
